CptS 355- Programming Language Design

Python Introduction

Instructor: Sakire Arslan Ay

Fall 2023

WASHINGTON STATE UNIVERSITY
World Class. Face to Face.

Python Intro

- To run Python programs, you will need the Python interpreter:

- A program can be one or more Python files. Code files can include other files or modules.

Python

TO-DO:

- Download and install Python
  - https://www.python.org/downloads/
  - Install Python3 (not Python 2.7) -- latest Python 3 version is Python3.11.2

- Python comes with the IDLE
  - IDLE is Python's Integrated Development and Learning Environment.

- To run/debug Python code using VSCode, install the Python extension (by Microsoft).

- Also install Python JupyterLab : the web-based interactive development environment for Python notebooks and code
  - To install JupyterLab run the following pip command on command line (https://jupyter.org/install) :
    - `pip install jupyterlab`
  - To launch JupyterLab run the following on the command line:
    - `jupyter-lab`

Python

TO-DO (cont.):

- Watch the Python videos on Canvas

- Start the Python tutorial
  - https://docs.python.org/3/tutorial/
    - Sections 1 through 6
  - https://pythonbasics.org/

Run Python code

- To run code on the terminal:

```
python myfile.py
```

- To run code using Python IDE
  - Will show in class.

- To interpret Python code at the REPL:
  - Type and run Python code.

To quit the REPL:

```
quit()
```

- To import a file (module) at the REPL:

```
from mainfile import *
```

Python Intro

- Python 2 vs Pyhton 3
  - On Mac and Linux, use ”python3”
- Python is an interactive, interpreted, objected oriented language.
  - It is often compared to languages like Ruby, and Perl, as a scripting language.
  - Python code can be evaluated in REPL environment.
- Python has “dynamic strong typing”.
- **Introspection in Python:** the ability of a program to ask questions about itself

Lecture material

- Please watch the Python part-1 and part2 videos on Canvas.
- No lecture notes on Python basics
- Lecture notes on:
  - Python lists
  - Python dictionaries
  - Higher order functions, recursion
  - Classes, iterators, streams
